

AGILE, SCRUM & KANBAN FOR TEAMS

INSTRUCTOR-LED WORKSHOP

COURSE SUMMARY

The Agile, Scrum and Kanban training for teams is designed as a hands-on training workshop for the entire team including developers, Product Owners and Scrum Masters. The benefits of the whole team approach are that it helps cement learning, the team members all hear the same thing and the team can share their specific challenges and make decisions on improvements or experiments to try. There is also a significant team-building benefit of this training approach which accelerates team development.

WHO SHOULD ATTEND

This course is best suited to new Agile teams including developers, business analysts, architects, testers, Scrum Masters and Product Owners. Key team stakeholders such as project managers, managers and subject matter experts will also benefit from attending. Participants will be ready to roll up their sleeves and hit the ground running with Agile ways of working.

COURSE OUTLINE

- Overview of Agile, Scrum and Kanban
- Common Agile Concepts and Practices
- Using Kanban
- Mastering the Scrum Framework
- Creating Your Product Backlog
- Creating Effective User Stories
- Planning in Agile
- Agile Tools, Templates and Resources

KEY LEARNING OUTCOMES:

Following this training, participants will be able to:

1. Summarize what Agile means and how it differs from traditional approaches
2. Describe the benefits of Agile approaches
3. Understand the terms and practices associated with Agile frameworks
4. Understand the roles on an Agile team and what is expected of each role
5. Design a Kanban board for a department
6. Plan and initiate an agile project
7. Understand the events in Scrum and what happens in each
8. Create a product backlog
9. Demonstrate how to create effective user stories
10. Contrast Kanban and Scrum and know when to use each approach
